			<input type="checkbox"/> P.H.D/M.D	<input type="checkbox"/> Academ
			<input type="checkbox"/> Master	<input type="checkbox"/> Professional

Personal Profile (基本情况简介)

(around 150 words, including basic introduction, research direction, teaching experience as supervisor for international students)

As the chairman of the Respiratory Physicians' Branch of Fujian Medical Doctors Association, I have a deep understanding of respiratory diseases. The research directions include the interstitial lung disease, lung cancer and therapeutic intervention of respiratory endoscopy. Our team conducts a preliminary study on the clinical characteristics and pathogenesis of patients with pulmonary fibrosis, which also makes a solid foundation for further research on the pathogenesis of pulmonary fibrosis. I have been committed to the study and clinical application of bronchoscopy diagnosis and treatment technology. I have taken the lead in diagnosing a variety of rare airway diseases in China and participated in the formulation of Chinese expert consensus on related diagnosis and treatment techniques. I have published a number of academic papers and trained many excellent graduate students, which would help to cultivate international students.
